

PLC CHECKER

QUANTIOR®
AUTOMATION SYSTEMS

Ensure
compliance

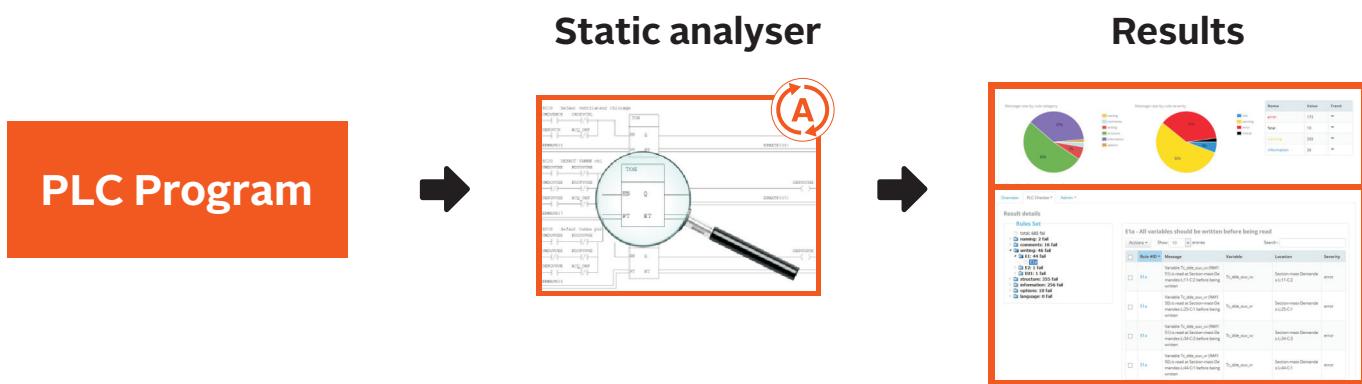

Manage
program quality

Improve
maintainability

PLC Checker is a static analysis tool allowing you to automatically verify your PLC programs against a chosen set of programming rules.

Verify a program with your chosen programming rules, whether a preexisting rule set or customised rules

Manage the quality of programs provided by your suppliers (system integrators, machine builders...)

Avoid bugs in the code by finding them early when it's cheapest and easiest to correct them

Reinforce safety and security by ensuring that the code is robust (i.e. no dead code, no backward jumps...)

PLC Checker was developed by Itris Automation, a Schneider Electric company, who provides development tools for programmable logic controllers (PLCs).

They are already using PLC Checker:

Supported PLCs include:
Schneider Electric Unity Pro,
Siemens Step7 & TIA Portal,
Rockwell RSLogix5000...
